

Providing Timely, Accurate Insightful Financial Services and Solutions

Financial Management

At Northrop Grumman, our experts apply sound Financial Management principals using leading-edge technologies and analysis methods to provide timely, accurate, and insightful financial information and services to customers ranging from members of the Intelligence Community (IC) and the Department of Defense (DoD) to other Federal agencies. We offer a range of financial management solutions, including budget and strategic plans development, financial execution and operational support, financial systems analysis and implementation support and training.

Budgeting and Strategic Planning

Within the budgeting and strategic planning area, we assist our clients with budget development and review processes, program assessments and reviews, and budget strategies to set program priorities and satisfy Congressional and DoD direction. Our team develops sound budget justifications through the use of customized analysis and tools that help assure budgets are well justified and that funds match program schedules and milestones.

Financial Execution and Operations Support

Our financial execution and operations support capabilities are built around the vast experience of our staff with IC and DoD financial systems. Nearly 100% of our team has five or more years of experience working with these systems. Our financial experts not only understand how these systems work, but they also understand how these systems impact the budgets and the programs supported. We also have specialized knowledge of the financial and programmatic benchmarks used by Congress, OSD, and the IC to assess the financial health and viability of acquisition programs and operating activities. In addition, we provide specialized analyses of financial operations and programs, such as cost-benefit analysis, that empower our customers with the financial insight required to make timely decisions on critical financial issues.

Financial Systems and Implementation Support

Financial systems implementation and support continues to be the premier capability of our financial management operations. Our staff of financial domain experts uses leading-edge process mapping and process engineering techniques to document and streamline financial processes and identify new financial system requirements. Since our department was a member of the government team that helped develop Joint Financial Management Improvement Program (JFMIP) requirements, we have intimate knowledge of the JFMIP core financial system requirements. We also have in-depth knowledge internal controls and accountability standards, the Government Performance and Results Act and the Chief Financial Officers Act. We have hands-on experience in numerous financial system implementation and transition projects and have received special recognition for our contributions to these efforts from our government customers. Our team also has experts experienced in various query and report writing tools such as "Forest and Trees", SQL, Hyperion, and others. These capabilities give us the skills necessary to quickly and effectively satisfy critical financial information needs that cannot be met by the standard financial system reports and query capabilities. A number of our team

members are also trained in Armstrong Laing's Metify, an Activity Based Cost/Management system; American Management System's Momentum financial accounting system; and various other systems and tools that our customers have employed in their financial and accounting operations. This background and experience makes us particularly qualified to assist our customer in accounting and controlling their resources and building budget justifications that effectively satisfy Congressional review and senior management information needs.

Financial Training

Our department also provides financial training support to our customers through the development of web-based courseware and the Northrop Grumman Virtual Schoolhouse. This capability enables our customers to pinpoint training programs toward those skills most needed by their staff with courses that can be built quickly and efficiently by educators who are also financial experts. These courses are designed to satisfy learner needs for just-in-time training of critical skills and understanding of financial processes, programs and responsibilities.

For More Information

Our Financial Management experts are available through several vehicles including the GSA Contract Schedules.
