

## ▼ Tactical Decision Agent

### *Advanced Messaging for Tactical Deployments*

Northrop Grumman's Tactical Decision Agent™ (TDA) offers the same advanced messaging capabilities as its Decision Agent™ (DA), and offers enhanced functionality for tactical deployments. It operates without Fortezza® in the field, reducing administrative support and minimizing bandwidth requirements. With its small footprint, as little as one unit, the TDA can be rack-mounted or installed in a rugged transit case for mobile, field deployments.

Like the DA, the TDA is a complete solution, automatically identifying, filtering and distributing DMS and legacy messages to specified recipients, based on user-defined interest profiles. The TDA can be used as a stand-alone for small user communities and mobile operations or combined in a network with the DA and other TDAs, extending messaging capabilities to disparate field locations.

The TDA can be deployed under multiple concepts of operation. One concept minimizes the use of Fortezza® in the AOR, another eliminates Fortezza® for deployed forces, greatly reducing administrative overhead.

TDA tools are user-friendly and intuitive and support set-up, configuration management, administrative functions and end-user interface to DMS. TDA's web-based user interface allows users to prepare messages and manage utilities. Browser-based administration and operations management tools display visibility and status of the tactical domain.

To schedule a field trial, demonstration or for a copy of the Tactical Decision Agent white paper, please contact:

#### **TDA – Designed for Tactical Implementations**

- ✓ Available with or without local Fortezza®
- ✓ Web-based access for creating and receiving messages
- ✓ Eliminates DMS components in the field
- ✓ Reduces bandwidth requirements
- ✓ Continues operation when reach-back link is unavailable
- ✓ Automatic PLA and DIT updates
- ✓ Simple CD-based installation
- ✓ Reduces administration – no Fortezza maintenance
- ✓ Remote administration from any network-connected workstation
- ✓ Small footprint – as little as one unit
- ✓ Rack mount or rugged transit case
- ✓ Decision Agent Secure Transport (DST) performs multi-encrypted, PKI-authenticated links between systems
